Summary: 1st year: 20% cheaper, 4th year 34% cheaper, every 4th year additional refurbished filter for "free". [Hydrogen enrichment](#) not included. UV disinfection combined with reverse osmosis is useless. Monthly check with a ppm-meter can double-triple filter usage period.

Basic filter with the same ppm-effect 2610 DKK and 115 DKK/additional year.

If input water is not too bad and there are not many users, filters can last a whole year and more
